AUTHOR'S PREFACE

This book can be considered to be the second edition of "The Mate in Studies" that was published in Russian in Tbilisi in 1990 but it differs from the first one in many parameters. The first book contained 3600 studies with mate finales. The number of finale pictures was about 1600.

Later, the authors intended to increase the volume of the presented material and create a kind of world anthology of mate studies. Unfortunately, my co-author, international grand master Gia Nadareishvili died suddenly in 1991 and the work was not accomplished.

My previous book "4232 Studies with Stalemate" was the first book of the world anthology of chess studies. The present book is the second volume of the anthology.

The volume contains 4492 studies though the number is not exact, for in the process of type-setting some studies were taken out of the book as there were gross mistakes in them, but the numbering has been left the same. (It should be noted that there can be many incorrect studies as it was not our aim to reveal them, which is a very difficult process. Here are shown them as they were "born"). The number of finale pictures amounts to 2000. Several reference tables have also been compiled.

Table No.1 (Index of groups, Mate Positions) contains the list of "white forces" groups taking part in creating a mate. It only refers to those white pieces that take active part in making up mate positions. The conventional signs for the numbers of groups with white pieces (including pawns) -G1, G2, G3, etc. - also have numbers of mate positions that are "decoded" in the special index of final mate pictures. Each of these pictures, designated by a conventional number (M1, M2, M3, etc.), clearly demonstrates the concrete mate finale in the given collection of studies through a conventional diagram. The reader can also come to know how many mate pictures have been made up by study composers and where they can be found.

The succession of the schematic representation of mate positions is given according to the increase of the "weight" and number of pieces as well as the spatial arrangement of mates on the chessboard: first comes mate in the corner, then - mate in one side of the board and at last comes mate in the centre (which is the most complicated kind of mate). It should also be noted that the number of the mentioned "pure" mates with white pieces really exists if only there are some compensatory "black forces" on the board (the black pieces are not given in the diagrams to avoid their "overloading").

The given index, while facilitating the search for the needed study, may also be considered to be a kind of "Mendeleyev's periodic system", where an inquisitive reader can come across a lot of empty squares for mate positions that have not yet been filled by composers. So this index may serve as a sort of guide in the labyrinth of mate finales as well as a reference book of "what has been done and how" and "what else can be done". But the search is still conducted from the position of white forces that mate the king, though black pieces are also necessary, as they reflect the structure and the means of capturing the black king. Mate is usually made up with the "help" of black pieces that want to protect their king but fail to do so due to the positional mess. Thus, black pieces turn out to be bound or they block the king's site, i.e. they carry some meaningful load of the mate situation. Consequently, their systematizing becomes necessary. This is done in Tables Nos. 2, 3, 4.

Table No.2 (Mates with the pinning of pieces) contains the information on the studies in which ideas of binding the pieces in mate finales are realized.

Table No.3 (Mates with the blocking of pieces) includes the index of mates with the blocking made with the help of 2 or more pieces. But to simplify the matter, only corresponding numbers of studies are given. It should also be noted that the pieces bound by the king's row are shown as the blocking ones.

Table No.4 (Model synthetic mates). As there are too many model mates in one mate studies the table only contains the studies with model synthetic mates (2 and more model mates). The syntheses may either be homogeneous or not.

The main part of the book consists of the studies with solutions (all of them are in the diagrams). The number of the mates made up in a study is given at the end of the solution; this enables the reader to find the corresponding mate finale. This part of the book is supplied with a short review "Mate with a Single Piece", where an attempt of analyzing some peculiarities of studies with a single piece finale is made. The book ends up with the complete index of the studies and their authors.

This book, as well as the first volume of the anthology, is the most complete edition on study composition and is dedicated to one subject only.

Undoubtedly, it will be entertaining not only to chess study amateurs and chess-players but also those readers who are interested in chess problems, and so they will be able to learn a lot about the process of constructing different mate pictures. One can suppose that the mating of the king in one, logically proved way, in the situation imitating the real game is much more difficult and interesting than doing so in the situation full of mate "threats" which is characteristic of two and three-move chess problems.

We may consider our task to be fulfilled if the present work appears to be of any help to study composition specialists and all the chess amateurs.

Iuri Akobia

Tbilisi, Republic of Georgia.
1994 (2013)

P.S.

1. In this version, all three volumes made the maximum correction of the authors' names and diagrams. The important thing is that this edition is completely replaced with new fonts - Chess Merida.
2. The number 4492 does not match the studies in the book. Unfortunately, some of the diagrams were excluded because of the repetition.

MATE WITH A SINGLE PIECE

We hope that a reader will understand the difficulties that have arisen in the process of collecting and systematizing 4492 studies with mate finales. True, not all the studies with a mate have got mate ideas. The mate in a mate study is the object of aesthetic perception and so it must be perfect from the point of view of compositional canons. The main ideas in many of these studies present some other motifs of the winning themes though the studies end in the mate. Nevertheless, such studies still seem to be valuable and so they are included in the book.

It should be borne in mind that a genuine artistic study with mate came into being at the beginning of this century. A. Troitzki is undoubtedly considered to be the author of mate themes. He surprised chess specialists with such excellent ideas as the mate with a single bishop, the mate with a knight in the presence of concentrated black forces and so on. His colleagues - Platov brothers, Sehwers, Kubbel have also dwelt upon this theme. Studies composed by the latter are considered to be masterpieces.

Unlike the above-mentioned authors, some foreign study composers have for a long time been under the influence of Rinck's methods of composition that are somewhat alien to the mate theme. It must be noted, however, that H. Rinck himself did pay tribute to this theme.

It goes without saying that the mate theme in a study can be genuine or formal. The formal performance of the theme through its aesthetic "poverty" makes the mate less expressive and the final picture is not stressed. The genuine expression of the theme implies the presence of the unusual so-called "beautiful" mate to the king as a result of the preceding battle of pieces.

We shall try to draw your attention to those studies where single pieces take part in the finale. It should be noted here that we do not have a claim on being absolutely true... Tastes differ...

The present article is intended for the beginners as experienced readers are sure to understand everything themselves. This is the reason why we have not dwelt upon the mate realized by other means.

G1 (♠)

This group contains the most elementary mate studies. At first sight, it is difficult to imagine that any new ideas could be elaborated on this material, but, while looking through the collection, we see that this is not so. One can say for sure that there is still much to be done in synthetic studies.

But still, the pawn - the most elementary "particle" of chess material that plays a significant role in a chess game - cannot be the main force in a mate study. Here we have shown everything that has been done with the help of the pawn up to this time and the reader can see that quite a lot of interesting works have been composed.

Nos. 0001 - 0006 (M1) in G1 are the simplest studies where the finales can already be seen at the beginning; this is conditioned by the low technique of the study composers of old times. On the contrary, Nos. 0007 - 0009 (M2,3) are performed very dynamically with the active blocking of light pieces. Nos. 0008 - 0017, 0019 are especially interesting. Mate M4 in Nos. 0029 - 0044 is realized in almost ready-made "nests" which produce an impression of sketchiness, while Nos. 0041 - 0042 are more perfect in this respect. Nos. 0047, 0050 (M5), No. 0053 (M6), Nos. 0057, 0058, 0060 (M8), Nos. 0062, 0064 (M9) and No. 0068 (M12) are quite nice. Complicated finales in the centre of the board are given in Nos. 0070 - 0074 (M17 - 18). Nos. 0073 and 0074 are also worth interest.

The situation is quite different in complex studies (let us call the studies with one simple mate and those with 2 and more complex mates) and no wonder. Here the composer is given an opportunity to express these ideas more vividly though it is not so easy to do. The authors have succeeded in creating the mate syntheses in Nos. 3517 - 3519 (M4). The same mate is achieved in the syntheses with mate M90 in No. 3522, etc. The complicating of studies in synthetic cases is quite a promising idea.

G2 (♘)

A knight, unlike a pawn, is more flexible and dynamic. This fact gives rise to a number of studies that are very interesting from the point of view of their composition. True, the knight can not move very quickly, but the composers make the best use of its manoeuvrability. Mate finales cannot be complex and attractive by themselves, but the composer could still use all the potentialities of this original piece.

One should bear in mind that a study cannot be composed with a knight only. Different other pieces also take part at the initial position and the study is completed by the knight. The same applies to all the studies with single-piece mates. The skill of a study composer consists in using most optimal and economical ways of composition. In this respect you will come across the studies of different level. To our mind, every study compels worth attention as they will only contribute to the erudition of the study composers.

Studies with M19, 20 mates are the most numerous ones in this group. There are quite a lot of interesting studies with such finales among the simple ones. But studies with corner mates are worth special attention. These are Nos. 0099, 0106, 0114, 0124, 0153, 0158, 0170. The initial position of the black king does not give cause to think that it will be captured in such an awkward position during the first part of the game. This fact speaks for the high skill of the composers. There exist various motives of bringing kings in to the corner position - from the rude "pushing" to natural moves.

Syntheses in Nos. 3527, 3539, 3541, 3543 are quite interesting. Such mates cannot be performed in different corners though this difficult task may still be fulfilled.

Corner mates M21 (No.0186), M22 (Nos. 0191, 0194, 0196, 0200), M24 (No. 0213) are worth attention too. The last one demonstrates the unique construction on a fairly high technical level.

Among the mates on one side of the board the most noteworthy are M34 (Nos. 0221, 0223, 0224), M35 (No. 0234), M36 (No. 0237). No.0239 (M37) is realized very skilfully; no wonder, Liburlin is its author. Mate M39 in No. 0245 is quite nice too. The reader cannot but pay attention to M41 (Nos. 0250 - 0252), M43 (Nos. 0256, 0257), M44 (Nos. 0259, 0263), M46 (No. 0264), M48 (Nos. 0267, 0268), M49 (Nos. 0269, 0270, 0272). Mate M50 in Troitzki's No. 0273, Gurvich's No.276 is simply wonderful! Mates M59 (No. 0286), M60 (No. 0287), M62 - 85 can be considered unique, they are represented by respective works though their quality is not always satisfactory.

It should be noted that quite a lot of ideas can be seen in central mates - blocking is the most interesting among them. It cannot be otherwise. The knight can strike a blow on one side only and the king can deliver the rest of the blows. That means that the black king is deprived of three fields and one more blow is aimed at him. All the other fields are being blocked. While elaborating such mates it is important to perform active blocking, i.e. to bring the blocking pieces together in the process of game instead of arranging them in the initial position beforehand. That is why it is only here that you can see a great number of different blockings. It applies equally to the pawn ending.

It is not easy to cover the wide range of ideas present in synthetic works. We think that the reader has a right to draw conclusions and understand which works are perfect and which ones are still to be improved. This will give a rise to new ideas and new works. We hope for this.

G3 (♗)

The bishop, as compared to the knight, is a more mobile and long-range though less manoeuvrable piece. For this reason, this piece is used somewhat differently. "Bishop" pictures have considerably less mate positions than "Knight" pictures.

Mate M87 numbers more than 80 studies. But at close observation we shall see that beginning with No.0311, that was composed at the beginning of the 18th century, all of them are schematic. No.0317, that has already been mentioned before, is a classical example of the

perfect work by Troitzki. Though it should be mentioned here that this idea was also elaborated by Tortilla in the problem (♖e7, ♘b5, ♙b8, ♚c8, ♜a7, ♞a4,- Mate in 4 Moves). Later on, Troitzki returned to this idea several times - in Nos. 0319, 0320, 0325, etc. Chubby also dwelt upon it in No. 0330. The idea was further elaborated in other works - Nos. 0340, 0348, 0349, 0350, 0366, 0370, 0377, 0383, 0392, 0395. The same type of mate is present in synthetic Nos. 3556, 3557 - 63 (M20, 87) and No. 3564 contains a complex mate picture M43.

A small number of studies containing mate M88, Nos. 0400, 0403, 0405, 0410 are rather interesting too. M89 in Nos. 0411, 0413, 0415 deserves special attention. Nos. 0426, 0433 (M90), 0439, 0440 (M92), 0452 (M98), 0458 (M99), 0463 (M102), 0466 (M104), 0467 (M105) are quite interesting.

Excellent studies can be seen in complex works, e.g. Nos. 4307 (M92a, 1211, 1211a), 4433 (M51, 91, 95, 539), 4434 (M87, 89, 103), etc. In the last one the bishop is the mating piece in all the finales; this is very important in elaborating a study. Such a composition emphasizes the strength and potentialities of pieces and, moreover, has highly aesthetic effect on the reader. These ideas can be complicated by introducing blocking pieces both in simple and complex compositions. By this we mean active blocking. It should be noted that it is always interesting to elaborate reciprocal mates. Such studies are not very common in earlier works which is conditioned by low techniques.

G4 (♖)

Study composers have always shown interest in the rook. Although it does not differ much from the bishop, but it still has its own advantages.

Mates M108, 109 are not of any value for the mate study though the studies themselves are quite interesting. It should be noted that synthesis may arouse certain interest.

The rest of the corner mates deserve special attention. Mate M110 in No. 0511, that belongs to a famous Finnish study composer Kivi, shows us the beauty of the weak transformation of a black pawn. The black forces have to turn the pawn into the knight which is forced to block his king in the finale. The same finale is observed in No. 0513 though certain extra pieces spoil the picture. The umpire that has awarded 1st prize to this study could hardly have known the predecessor. The history of Nos. 0516 and 0517 with the beautiful mate M111 can serve as such an example. The first study, besides the mate finale, has an interesting winning and the prize winner is considerably inferior to its predecessor by the content of the game. The synthetic study No. 3703 by Prokes is the illustration of successful creative work. Here we have M11, 1070. Mate M112 has passive expression in all the studies. It should be noted again that the blocking in mate finales has no sense if these areas have been blocked from the very beginning. Dynamic blocking and blocking pieces should not only exist on the board but also play an active part in the process of game. The authors have not been very successful in elaborating mate M113. Only the knight is dynamic in Nos. 0524 - 0529. No attempt is made for weak transformation or syntheses which is quite feasible. Mate M114 has been performed many times, but besides synthetic works, it is of no interest for the mate theme. True, many studies deserve attention through their interesting game and ideas that are manifested in them. Mate M115 has not undergone any development since the times of Horwitz (1880). Matous has worked out the pure mate in No. 0598 though he has failed to dynamize the blocking pawn, and grand masters Krikheli and Rusinek have done this in Nos. 0599, 0600. M114 has been added to the synthetic No. 3597 - this is very beautiful! In No. 4314 the authors have performed it with two mates together with the binding of the queen. It is appropriate to mention here the following: while composing a study, the author does not always understand what he is aiming at and if he has achieved this, something new and unexpected may still arise in the process of work. So we do not know what the authors of the above-mentioned study were aiming at, which one of the three mates they had in their mind, what was essential for the authors. It is a fact that the triad is not bad. No. 0601 (M116) is undoubtedly magnificent. The ideal mate is very good in synthesis - No. 3598 (M114, 116). Grand-master Pogosyants has presented this mate

very nicely in No. 3699; M900 is very nice, too, but, unfortunately, blockings are quite passive here. If we live up the second mate, we shall get a valuable study.

Among mates M117, 118 Nos. 0603, 0608, 0609, 0610, 0611 - 613 are especially interesting. Each of them contains new ideas. Nos. 3698, 4310, 4311, 4436 are the best ones among synthetic studies. Studies with mate M119 are schematic. Mate M12 is very good; it has been very nicely elaborated by Evreinov and Polin in No. 0624. It is a pity that the umpire has not perceived the original character of the study. But maybe the competition was too strong and there were no prizes left? It is not likely to be so.

The structure of mate M125 is surprising. This mate is known under the name of "EPAULET". At the same time it was elaborated in the Republic of Georgia. All of them are equally interesting. But the young study composer Gogberashvili has created the best mate of all in No. 636.

In No. 0648 (M130) three-fold active blocking is shown; the finales in Nos. 0653 - 0656 (M134, 135, 136) are very interesting. Here the modern tendency of complicating the ideas of central mates is manifested.

The reader has perceived the potentialities of the rook. There exist certain prospects for further work. First, the already known mates are not always perfect, second, little has been done in synthetic studies so far.

G5 (♔)

The queen is, undoubtedly, the main force both in chess and in composition. But this fact increases the demands made to the study composer's technique. The queen should be treated more subtly, as it is difficult to tame this piece.

If we dwell upon the queen mates, we shall catch the likeness between them and mates with the bishop and the rook. It is only natural, as the queen possesses all the potentialities of the above-mentioned pieces. Nevertheless, great progress has been made in studies with the queen as regards their content and mate constructions.

We shall not discuss mates M137, 138, 139. Studies with these mates contain a lot of other interesting ideas and will afford great pleasure to the reader.

No. 0687 can be considered to be the first one to contain the corner mate M140. One can say that the "birth" of the study was sufficiently civilized. Here we have the transformed queen and the active blocking of the king's zone. Has there been any progress among the study composers? Let us see.

No. 0689 is the first to be discussed. Its author Grigoriev - the greatest specialist in studies with pawn - has managed to make progress both in the purity of the finale and in the scale and dynamic character of the game. No. 0690 is almost the same as the above-mentioned one.

The reader may notice that extra black pawns are present in finales but, if it were not so, the final mate would have no sense at all. No. 0694 may serve as an example where you can justify a finale in the presence of black forces. What an exciting game, what unusual, original moves! Grand master Rusinek's No. 0697 is excellent. A dynamic game and economics multiple transformations and an ideal finale in the end!

Mate M143 was made up in 1990 in No. 0713 at the Byelorussian championship. Its author Porov not only managed to create a new type of mate, but also synthesized it with an interesting variant. Further studies on the same theme have not introduced any cardinal changes though Nos. 0714, 0717 could be considered somewhat better. In a synthetic study No. 3726 the author has managed to mate with M794. The most complex corner mate M145 is realized, as we know, in 5 works. No. 0720 is composed very neatly but, as it often is the case, the umpire has not paid due attention to it, having concentrated on No. 0719, which resembles the first one in some aspects. True, the same finale is present here too, but it is not created in the process of game and is on the board from the very beginning. The difference is very great indeed.

It should be noted that the further way for developing corner mates consists in creating synthetic works only.

Among mates on one side some mates with two or more blockings deserve special attention. The unique mate M159 (No. 0910), created in the middle of the 18th century, has no analogues. Kubbel in No. 0920 has transferred mate M163 on one side of the board - he was a success this time. Later, nobody tried to improve this idea. Mate M165 (No. 0921) can also be considered unique. Grand master Gurgenzidze has elaborated very interesting mates (M28, 28, 166) in his synthetic study in No. 4303. No. 4336 compels is also worth attention. Such kind of work is always interesting if we do not want to invent the already known things which is often the case even with experienced composers. Nos. 0927 - 0928 (M173), 0933, 0935, 0936 (M169), 0941 (M173), 0944 (M175) are very nice. But several mates on one side of the board arouse special interest. Mate picture M178 is wonderful for its purity and beauty, it is achieved not through the simple arrangement of pieces but by the dynamic play as well. Grand master Kasparyan is famous for his resourcefulness, magnificent fantasy and, above all, high technique. Lommer's work - No.948 (M180) resembles the above-mentioned study, though the mate is not model here. In mate M182 the reader will easily understand that the complexity of finale is not justified by anything - it has practically been made up beforehand. One should never be carried away by such a method of composing finales.

Synthesis studies are presented by much more interesting works. Nos. 3634 (M163, 181), 3719 (M175, 414), 3632 (M162, 162), 4332 (M173, 1196, 1209), 4333 (M174, 1279, 1290), 4334 (M175, 1277, 1284) deserve special attention.

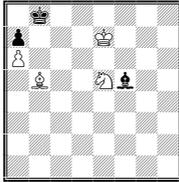

Central mates, especially those with the queen, always arouse interest. Let us dwell on mates with dynamic blockings. Unfortunately, their number is not very large. Mate M192 in No. 0972 has been performed due to the high manoeuvrability of the queen. The same applies to No. 0977. A fine play is demonstrated in No. 0988 (M195). An ideal finale is shown in No. 0990 (M196); Nos. 0991, 0992 appeared later. The high estimate of No. 0993 seems somewhat unexpected (unfortunately, this happens quite often). No. 0994 (M197) is undoubtedly a good achievement. Unexpected finales are observed in Nos. 1000, 1001, 1002 (M199, 200, 201).

What can be observed in synthetic studies? Formally intricate finales are shown in Nos. 3738 (M206, 965), 4322 (M191, 200, 200). Nos. 4326 (M205, 476, 476), 4440 (M200, 201, 201) can serve as an example of complicating the already known ideas.

It should again be noted that the above-cited review of the studies with single-piece finales is not a dogma. The review is based on the subjective opinion of the author. The truth may be utterly different, but the reader with a creative mind will be able to draw his own conclusions.
